

Sewer, Water & Gas Lines

The Plumbing Source is Cuyahoga County's trusted provider of underground pipeline care. With 100+ highly-skilled technicians and a wealth of specialized digging, pipe-cleaning, and pipe renewal technologies, we resolve problems quickly with minimum disruption.

A leaking or clogged sewer line should be addressed right away. The issues tend to get more serious – and more expensive – the longer you wait. Call the Plumbing Source if you notice:

- strange sounds from your pipes
- foul smells, indoor or outdoor
- water marks on your walls and ceilings
- wet basement walls or floors
- standing or ponding water in your yard
- slow drainage system

Residential & Commercial Sewer Line Services

Whether your sewer lines are clogged, cracked, broken, punctured or corroded – lay under a yard, roadway or expanse of public land – the Plumbing Source can help.

- Clear sewer line blockages
- Hydro-Jet Cleaning
- Repair, Patching & Replacement
- Pipelining (trenchless pipe line renewal, CIPP)
- New sewer line installation
- Storm Sewer Cleaning & Repair
- Lift Station Cleaning & Repair
- Video Camera Inspections

Give old pipes up to 50 more years!

PipeLining Services

Traditional sewer line repair/replacement involves time-consuming, wide-spreading, large-vehicle excavation (noise, mess and water shutdowns). Our PipeLining solution rebuilds cracked, broken, root-infested lines from the *inside*. It is:

- **fast and quiet**; installation can happen in one day
- **minimally disruptive** to your landscape
- **less expensive**, requiring just a small crew and our specialized equipment

Be proactive about cleaning underground lines

Especially in older neighborhoods with mature trees and shrubs. Water-seeking roots invade, clog, crack and displace old pipelines. Roots may need to be cleared annually to keep the sewer line running freely. Call the Plumbing Source to discuss the best methods for your property.

Main Water Lines

The main water line connects the public water supply to your property. In Cuyahoga County, most municipalities are financially responsible *only* for the line between curb shut-off and property boundaries.

Factors that cause water line damage

Mostly, it's age. Older pipes can degrade, weaken and crack. Seals can spoil. And extreme temperature changes means years of repeated expansion and contraction. Overly high water pressure can also add stress to your pipes.

Signs you may have a water line leak

- higher water bills
- wet areas in the home
- unexplained outdoor water puddles
- low water pressure
- discolored water
- hissing or bubbling sounds from pipes
- foundational cracks
- mold and mildew
- frequent drain clogs
- bad smells

The Plumbing Source is an Approved, Licensed Contractor for the State of Ohio.

If your home or business is experiencing low water pressure, a complete shut down or a burst pipe, call the Plumbing Source right away. We offer a variety of solutions to repair and replace the lines.

Gas Line Services

We can repair or replace gas lines, meters and risers as needed. If you suspect a gas leak or smell sulfur (which is added to gas) this is an Emergency! Call us right away.

Emergency!

If you suspect a gas leak...

1. Remove everyone from the property immediately.
2. **Call 9-1-1** to report the issue.
3. Or call AEP Energy at 866-258-3782.
